Subject: Assistance for Application Crashes During File Upload

Dear [Customer],

I hope this message finds you well.

We understand that encountering an issue where your application crashes when attempting to upload a file can be frustrating. To assist you in resolving the problem, I would like to provide some guidance based on the information you have shared.

Firstly, ensuring that the file size is less than 50MB should help resolve this issue. If possible, please try uploading files within this limit and let us know if the problem persists.

Additionally, clearing your browser's cache might also assist in resolving the problem. This can be done by following these steps:

1. Open your web browser.
2. Click on the "Settings" or "Preferences" icon (usually represented as a gear).
3. Navigate to the "Privacy & Security" section and select "Clear Browsing Data."
4. Choose the time range for data you want to clear, including "Cached images and files," and click "Clear Now."

If these steps do not work, it is possible that there are other underlying issues such as server-side errors or compatibility problems with certain file types.

We appreciate your patience while we address this issue. If you have any further questions or need additional assistance, please feel free to contact us at [Your Contact Information].

Thank you for choosing ABC Technologies and for bringing this matter to our attention.

Best regards,
